

CHLOROPRENE RUBBER CR 244

Appearance: Milk white chips.

Description: A xanthogen or dodecyl mercaptan modified polychloroprene rubber with fast crystallization rate and high bonding strength at room temperature. The density is 1.23. It is similar to Denka's A series products and Du Pont's Neoprene AD series products.

Application: For making Chloroprene adhesives. The Chloroprene adhesives are used for bonding rubber, leather, fiber, metal, wood, cement products, etc.

Product Standard: Q/CHJT. J03. 03. 01-2022

Specification:

Item	Index	
Viscosity in 5% toluene solution, mPa.s	CR2440	13-24
	CR2441	25-34
	CR2442	35-53
	CR2443	54-75
	CR2444	76-115
	CR244A	116-140
	CR244B	141-400
Peel Strength, N/cm $\geq$	90	
Volatile, % $\leq$	1.2	

Packing: Packed in bags, 25kg net weight each.

Shelf life: One year below 25°C in cool place from the date of production.
