Technical Data Sheet

Markulzer® DTDM

Morpholine disulfide
[CAS No.: 103-34-4]

PROPERTIES:

Markulzer® DTDM is a sulphur donor: it can be used for complete or partial sulphur replacement (together with sulfenamides, thiazoles or thiurams). It leads to mono- and di-sulphur crosslinks. The replacement of sulphur with DTDM gives longer scorch times and faster cure rates. These compounds will also exhibit superior green stock storage stability. Markulzer® DTDM is used for NR, IR, BR, SBR, NBR, IIR and EPDM. It can be used alone with NR and SBR.
